Number	Task Steps	First Test		Retest #1		Retest #2	
		Pass	Fail	Pass	Fail	Pass	Fail
1	Look for any safety hazards as you evaluate the door. Inspect the door for the location and number of locks and their mechanisms.						
2	Insert the adze end of a prying tool (such as a Halligan tool) into the space between the door and the door jamb about 6 in. (15 cm) above or below the door lock. Push up or down on the tool to rotate the adze and to create a gap (or crease) in the door. To capture your progress, insert a wedge or tool before removing the adze end of the tool from the door.						
3	Insert the fork end of the tool into the gap between the door and the door frame.						
4	Instruct a second fire fighter to drive the fork in forcefully with a flat-head axe. Keep constant pressure on the tool and move the tool away from the door as it is being driven in. The tool is set when the arch of the fork is even with the inside edge of the door/doorstop and is perpendicular to the door.						
5	When the Halligan tool is set, push the tool sharply inward toward the center of the door to create maximum force.						
6	Maintain control of the door when it opens by hooking the door with the adze end of the Halligan or by attaching a strap to the knob. Limit ventilation of the fire.
