

Building Construction for the New Jersey Fire Service (2 day course)

**Presented by:
New Jersey Department of Community Affairs,
New Jersey Division of Fire Safety and Kean University**

To be safe and effective on the fireground it is critical for fire officers and firefighters to have exceptional knowledge and understanding of the types of buildings, building construction methods, occupancies, collapse hazards, construction materials and how the buildings they will be operating in will respond under fire conditions. Frank Brannigan, one of the authors of the building construction textbook adopted by New Jersey said it best when he coined the phrase "The building is your enemy, know your enemy."

This two-day Building Construction Training Program will provide attendees with the requisite knowledge of building construction types, methods, materials, hazards and operational considerations that fire officers and firefighters need to acquire to achieve success on the fireground. Fire officers who attend the program will meet the 12-hour building construction training requirements for Fire Officer I Certification in New Jersey.

Students must attend both days of class to receive the 1.0 DFS instructor credit. Attendees must hold a New Jersey Certified Fire I to attend.

Textbooks and all related training materials will be provided to the student, unless you were given one at the TTT session.
