OR

May 18 or 19

8:00 am - 4:00 pm

Paulsboro Refinery
600 Billingsport Road
Paulsboro, NJ 08066

The fact that we're losing Aqueous Film Forming Foams has a tremendous impact on the fire service. The replacement products have nearly none of the safeguards that have saved the countless lives of firefighters and civilians over the last 50+ years. Please join Frank Bateman, CFPS in learning and discussing:

- Strategy/Tactics - What changes will be required to accommodate the limitations of F3 performance, and firefighter safety.
- Incident Pre-Planning - The size and scope of major responses in the future will require complete rethinking of the end goal of a response when extinguishment is unlikely.
- Equipment and Delivery Systems - What will work in the future and the techniques necessary when applying the new foams.
- Logistics changes - More of everything will be required to achieve what could be considered a success. The importance of this change can't be understated.
- Testing - F3 products should be selected for many reasons and performance should be uppermost in the criteria used for agent choice.

0.5 DFS Credit will be issued for Instructor Technical.
